Complete Business Analysis Project

Project Overview

This project analyzes three business datasets: House Prices, Customer Churn and Sales Data. The objective is to identify business patterns and support data-driven decision-making.

Dataset Summary

House Prices: 300 rows and 8 columns

Customer Churn: 500 rows and 9 columns

Sales Data: 100 rows and 7 columns

Analysis Techniques

1. Exploratory Data Analysis
2. Statistical Analysis
3. Correlation and Outlier Analysis
4. Machine Learning (Customer Churn)
5. Data Visualization

Business Recommendations

1. Improve customer retention strategies.
2. Use property data for better pricing decisions.
3. Identify sales growth opportunities.
4. Monitor business performance regularly.
